Communications Forecast Given To Kiwanians

The most significant developments in the field of communications deal with the "unconscious" mind, the Waynesboro Kiwanis Club was told last night by Robert Monroe, president of Jefferson Cable Corp.

He termed this means of reaching people "subtle but tremendously effective."

Mr. Monroe said that he foresees in the television industry more miniaturization, better projection tv, more portables, vast improvement in color, three-dimensional video, and many applications in the field of medicine.

The speaker was introduced by Arnett Tomey.
